

# Environmental Policy

October 2011

---

## Sustainability

TouchIT Technologies believes that sustainability is an important business practice in today's modern global economy. At TouchIT Technologies, we are constantly encouraging improvement in all areas of environmental policy which include monitoring the use of raw materials and natural resources. The design of our products reflects our aim to minimise both raw materials and waste. The processes that we put in place at our factory and offices reflect our aim to reduce our impact on the environment. TouchIT Technologies seeks success in all areas of our business and is committed to minimising the environmental impact of our business activities.

To achieve this commitment, we will:

- Aim to continuously improve our environmental performance and integrate recognised applicable best practice into our business operations.
- Reduce our consumption of resources and improve efficiency in the use of these resources.
- Reduce waste generated by our business by implementing strong design architecture at product conception and actively recycling.
- Manage how our business functions in order to prevent pollution.
- Ensure our raw materials are environmentally sound. For example, TouchIT Technologies implements Steelcase's e3 enameled steel surface in its TouchIT Board™.

According to Steelcase, their *e3 environmental ceramicsteel™* surface is the industry's premiere, ecologically intelligent visual communication surface for whiteboards and chalkboards and the first and only visual communication surface to achieve International Cradle to Cradle Silver certification. ([www.steelcase.com](http://www.steelcase.com))

- Comply with all relevant environmental legislation.

To secure these objectives, we will:

- At management level continually review and monitor our environmental policy and set appropriate targets.
- Encourage feedback on our environmental policy both internally and externally.
- Communicate the importance of environmental issues
- Work together with our suppliers to encourage commitment towards improved environmental performance at all levels of the supply chain.

This statement represents our general position on environmental issues and the policies and practices we will apply in conducting our business. If you would like more information please contact us via our website [www.touchittechnologies.com](http://www.touchittechnologies.com)
